AETNA — Prior Authorization Request

Request ID:	AUTH-PA-2026-04-H8A5
Requesting provider:	Dr. Anand Mehta, MD, DM (Hepatology)
Submitted via:	Authrex / FHIR R4 Da Vinci PAS 2.0.1
Form:	X12 278 bridge

Sofosbuvir/Velpatasvir 400/100 mg (Epclusa) for chronic Hepatitis C virus infection

Patient

Patient (initials):	K.M.
Age / Sex:	52 y / Male
MRN:	MRN-66421
Insurance:	Aetna PPO

Diagnosis

Primary diagnosis (ICD-10):	B18.2 — Chronic viral hepatitis C
Genotype:	1a (confirmed by reflex testing 2026-04-08)
HCV RNA quantitative:	2.4 × 10■ IU/mL (high viral load)
Liver disease stage:	F2 (mild fibrosis) by FibroScan; non-cirrhotic
Treatment status:	Treatment-naive

Workup & co-conditions

HBsAg:	Negative (HBV co-infection ruled out)
HIV:	Negative
Renal:	eGFR 88 mL/min/1.73m² (normal)
Pregnancy:	N/A (male)
Drug interactions screened:	No contraindicated medications

Requested treatment

Drug:	Sofosbuvir/Velpatasvir 400/100 mg (Epclusa)
NDC:	61958-2202-1
Dose:	1 tablet PO once daily

Duration:	12 weeks

Clinical rationale

AASLD-IDSA HCV Guidance (2024) Category 1 evidence: Sofosbuvir/velpatasvir for 12 weeks is a recommended pan-genotypic regimen for treatment-naive adults with chronic HCV without cirrhosis (SVR12 ≥ 99% per ASTRAL-1 trial, NEJM 2015 Nov;373(27):2599). Patient meets all Aetna HCV-DAA policy criteria: confirmed chronic HCV genotype 1a, F2 fibrosis, treatment-naive, HBV/HIV co-infection ruled out, normal renal function. Specialist (hepatology) prescriber required and confirmed.
